DETAILED ACTION

Election/Restrictions

Applicant's election of Species D (Figures 5 and 6), claims 1,2,4-6,8-11,13-15, and 17-22 in Paper No. 5 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 3,7,12, and 16 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 5.

Additionally claims 10,11,13-15, and 17 are withdrawn as being directed to a non-elected species. Claim 10 recites "all peaks and troughs are longitudinally aligned with one another". Applicant's specification, pages 2,3, and 6 define the longitudinal axis as extending non-parallel to the elongate portions of the connectors. The claimed feature is not shown in Figures 5 and 6, i.e. the all peaks and troughs of adjacent bands are not longitudinally aligned.

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the peaks and troughs must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 6, are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 6 recites the limitation "the first end" in line 1 and "the second end" in line 3.

There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2,4-6, 8, 9, and 18-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Dinh (USPN 6,019,789).

With reference to Figure 6B, Dinh discloses a stent 160 comprising a plurality of axially spaced interconnected serpentine bands 162 (colored blue) consisting of alternating peaks and trough, a plurality of interconnected struts (dark blue), and a plurality of wishbone connectors 166 (colored yellow) that connect adjacent bands to one another. Wishbone connectors 166 have

an elongate portion that extends in a direction nonparallel to the longitudinal axis of the stent. Connectors 166 having a plurality of turns (Figure 6c) and a distal end and proximal end, both ends having two legs extending circumferentially and longitudinally therefrom. Portions of the width of the serpentine band are greater than that of the connectors.

With reference again to Figure 6C, Dinh discloses a stent 170 comprising a plurality of first serpentine bands 172 having one geometry and second serpentine bands 178 having a different geometry. Second band 178 is attached to adjacent first band 172 by a plurality of 1st substantially straight connectors. Second band 178 has a repeating pattern of first connectors extending distally from second band and two or more first connectors extending proximally from the second band 178. The first serpentine band 172 is connected by struts (colored green) that are greater in width than the second band 178 connected by narrow struts (colored orange). Both first 172 and second 178 bands have a plurality of openings having different shapes.
